

Living Base Fluid

Adjustable sliding system for wooden/aluminium doors and shutters

Max 60 kg

Fluid dampers

Living Base Fluid

Mechanisms for external in-line doors and internal overlapping doors with integrated Fluid system to ensure maximum silence and smoothness when opening and closing the door.

Living Base Fluid is an adjustable sliding system for wooden or aluminum doors. Thanks to the new Fluid damper, it is possible to create two doors with a minimum width of 450 mm, and they can be external or internal to the compartment, guaranteeing maximum silence and smoothness when opening and closing the door.

The Fluid system guarantees the reduction of the sliding friction between door and track and the reduction of the milling dimensions for the housing of the stop.

The Living Base Fluid system combines functionality and design, guaranteeing maximum flexibility and responding to market demands for solutions applied to the living.
