Spin

Terno Scorrevoli presents the new system for folding doors with an extremely smooth and quiet “compass” movement.

[Discover more](#)

Terno Scorrevoli presents the new system for folding doors with an extremely smooth and silent movement. The rotating and translating movement allows the doors to open fully, facilitating access to every corner of the compartment. Spin is also the ideal solution for corner and recessed wardrobes.

The modern design system can adapt to any requirement thanks to the practical adjustments on three axes, which are quick and easy to make. Positioned on top of the wardrobe, it has a minimal amount of space, so that full-height design solutions can be realised with as little space as possible between ceiling or false ceiling and wardrobe.
